

Mash out!

- * Raise the temperature on the temperature controller to 75.
- * Now is the time to make sure we have the exact amount of water in the urn needed to sparge.
- * My recipe says we need 17L of water to sparge (remember 1cm = 0.8L).
- * Let the temp of the mash rise to 75 C over 20 mins.
- * Keep stirring
